21	Thurs.	August 1st, 2019	Circle K	8154 Airport Highway, Holland, OH 43528	1 PM - 3 PM

Gas Cap Highlights (2019)

- The Gas Cap Replacement Program was initiated in 2001 and has tested over 28,000 gas caps
- The program has replaced over 2,150 faulty gas caps
- The program is a partnership between TMACOG and the City of Toledo Division of Environmental Services
- Faulty gas caps emit gasoline vapors which can turn into harmful ground level ozone
- A leaking gas cap can emit approximately 2 full tanks of fuel per year
- Testing for and replacing faulty gas caps saves drivers money and protects the environment
- The program helps raise ozone awareness with the general public

Ozone Reducing Tips

- Don't top off the tank – cold fuel has no room to expand and vapors or fuel will get forced out of the gas cap
- Drive less. Drive more slowly. Share a ride, chain trips, walk or bike. Take public transportation.
- Refuel your car or fill gas cans in the morning or after 6 p.m. Avoid spilling gas or releasing vapors.
- Conserve energy in your home to reduce energy needs: hang clothes outside to dry rather than operate a dryer, set your thermostat between 76-78 degrees in the summer to reduce air conditioner use.
- Properly maintain your vehicle. Get a tune up and inflate tires to the correct pressure.
- Turn your car off. Park the car and walk into the building instead of using the drive thru.
- Change your mowing habits. Mow the lawn less frequently or mow earlier in the morning or in the evening.
- Insulate and weather-strip your home.
- Run dishwasher and washing machines only when fully loaded.
- Turn off lights and appliances when not in use.
- Apply paint with rollers and brushes instead of sprays to cut down on fumes and to save paint.
